

# Yahya Salhi

Full-Stack Developer | Applied **AI** & Agentic Systems

Gafsa, Tunisia • pcclub10@gmail.com • yahya-salhi.vercel.app • linkedin.com/in/yahya-salhi-ai-engineer  
github.com/yahya-salhi

## Summary

---

Full-stack developer and technical instructor focused on applied **AI** and agentic systems. Since 2024, builds agent-based tooling alongside a full-time instruction role: **MCP** (Model Context Protocol) servers and clients, **Claude** Code pipelines, and a proof-of-concept **RAG** document analysis tool. Background spans embedded and hardware systems (custom UAV flight controllers, PID control) and modern web stacks (**React**, **Next.js**, **Node.js**, **Python/FastAPI**). Strong technical communicator with a track record of training 50+ technical staff and delivering freelance projects for SaaS and MVP-stage clients.

## Experience

---

### IT & Development Instructor

Tunisia

CMFPG, Ministry of National Defense

Jan 2018 – present

- Design and deliver technical training curricula in modern JavaScript (ES6+), **Python**, embedded C++, and systems fundamentals to 50+ technical staff.
- Since 2024, build agentic **AI** tooling alongside instruction duties: an internal proof-of-concept **RAG** pipeline for document analysis (**Claude** & **GPT-4o** APIs) and personal R&D into **MCP** servers and clients, plus **Claude** Code (hooks, subagents, headless pipelines).
- Conducted a security audit of a full-stack project, identifying a ReDoS risk, a Postgres RLS bypass, XSS via unsafe innerHTML use, and an unsafe Prisma migration command.
- Develop internal tooling as part of the role: **React/Node.js** portal modernization and an ESP32 telemetry dashboard streaming field-asset data over WebSocket.

### Software Developer

Tunisia

Organization (Internal)

Jan 2015 – Dec 2018

- Built and maintained internal software tools and web portals for the organization, establishing the full-stack foundation applied in later roles.

### Full-Stack Developer

Remote

Freelance

Ongoing

- Deliver **React/Next.js/Node.js** projects for SaaS and MVP-stage clients.
- Built UpKeepPro, a MERN-stack facility maintenance management system: asset tracking, tool-lifecycle logging, and priority-based work order management.

## Projects

---

### \*yezzi\*

**AI** assistant concept for North African diabetes patients; uses **Claude** Vision for carbohydrate estimation of traditional dishes and TimescaleDB for glucose-trend analysis.

### TITAN-Z Quadcopter Drone

Custom flight controller (Arduino/ATmega328P) with a 250Hz sensor-fusion loop, closed-loop PID stabilization, and self-designed PCBs; extended with fiber-optic (SFP/MAVLink) telemetry for long-range control.

### \*AI\* Job-Search Agent

LLM-driven browser automation (Stagehand) for multi-platform job discovery, automated resume tailoring, and application drafting.

## Personal Finance Tracker

**Supabase** (RLS-protected) database with **Gemini AI** for conversational budgeting insights and trend forecasting.

## Skills

---

**\*AI\* & Agentic Systems:** Claude (Claude Code, MCP), GPT-4o, Gemini, RAG pipelines, prompt & context engineering, agent orchestration

**Full-Stack Engineering:** TypeScript, React, Next.js, Node.js, Python (FastAPI), Tailwind CSS, shadcn/ui

**Data & Infrastructure:** PostgreSQL, Supabase, MongoDB, TimescaleDB, Docker, Git

**Embedded & IoT:** Arduino, ESP32, C/C++, PID control, sensor fusion (MPU-6050)

## Education

---

iset Gabes

DUT in Informatique Industrielle

Gabes, Tunisia

Jan 2010

## Certificates

---

**Anthropic:** AI Fluency for Educators (Advanced LLM Orchestration)

**DeepLearning.AI:** Generative AI with LLMs

**Cisco:** English for IT 1 & 2 (Technical & Professional Communication)

## Languages

---

**Arabic:** Native

**English:** Professional

**French:** Professional

**German:** Intermediate
